## **Cal EOC Incident – 2014 Drought**

SOC / Inland REOC remains activated in support of 2014 Drought

# WEATHER

## WEATHER SYNOPSIS BY REGION:

### **NORTHERN CALIFORNIA**

A weak system will move through the far north end of the state on Sunday with the bulk of the precipitation staying well north and east of the northern interior. A few showers may occur over Shasta County Sunday and Monday otherwise dry conditions will continue. Wetter for all areas by the middle of next week. Late tonight into Sunday morning the cold front moves into the North Coast bringing some light rain with most of the rain arriving in the morning. Rainfall is expected to range from a few hundredths to a third of an inch with the highest amounts in the hills of Del Norte County. Mendocino county will likely see just a few hundredths with up to a tenth of an inch in the north. High surf will continue to impact the coast today. Dry weather is expected to prevail through the San Francisco Bay Area through the beginning of next week. Warm temperatures are anticipated for the beginning of the week with unsettled weather returning later next week as rain arrives.

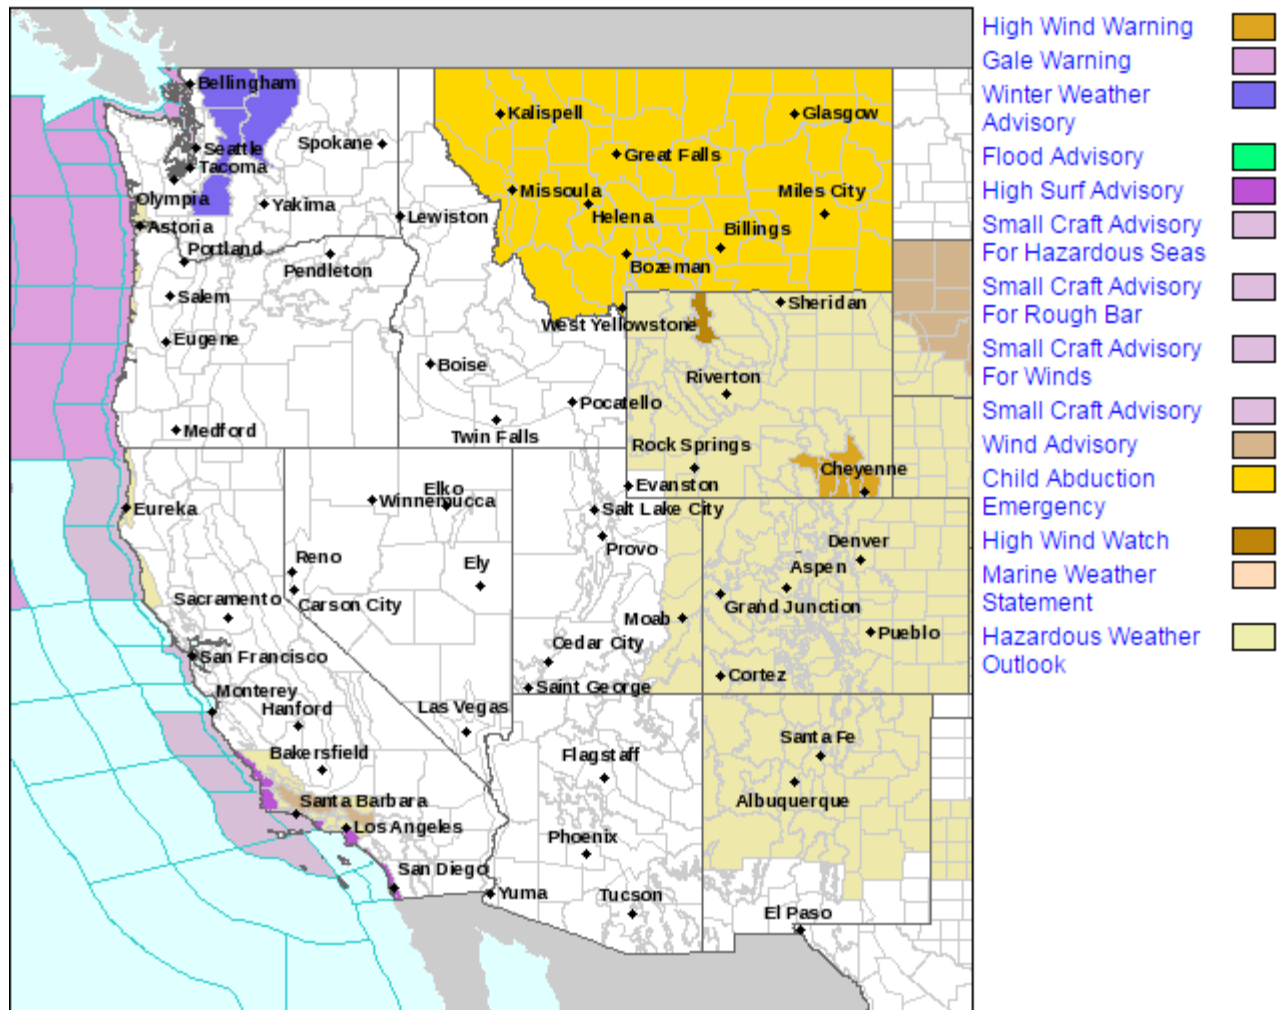

### **SOUTHERN CALIFORNIA**

This weekend the onshore flow will allow overnight low clouds and fog to form along the South Coast with cooler temperatures everywhere, but remaining several degrees above normal. A high will build in next week for a warming trend and decreasing cloudiness into midweek. A low will dip south by Thursday for increasing cloudiness and possible precipitation north of Santa Barbara. Fair weather and well-above normal temperatures will continue through Wednesday with Tuesday potentially being the warmest day due to a building ridge of high pressure aloft and weak offshore flow. The marine layer will bring areas of night and morning low clouds and fog to the coast and inland mesas tonight through Monday morning. Patchier night and morning low clouds and fog possible along the South Coast Monday night through Wednesday morning. Cooler Thursday with a deeper marine layer, stronger onshore flow, and gusty west winds in the mountains and deserts as a trough moves through the inter-mountain west. Weak high pressure aloft may produce warming again on Friday.
